COSMETICA HUB

BEAUTY. RESEARCH. INNOVATION.

Castel Guelfo di Bologna, 26th August 2024

I undersigned, Anna Mastropaolo, safety assessor for the company Cosmetica Hub SpA,

declare

that the cosmetic products branded **Diego dalla palma professional LENITIVO SOOTHING**

- comply with the current regulations governing the production and marketing of cosmetic products (EC Regulation No 1223/2009);
- are subjected to a safety assessment by an expert toxicologist before being placed on the market in order to protect the health of users by drawing up a Cosmetic Product Safety Report;
- may be used by persons undergoing cancer therapy or previous cancer therapy

In particular, for cancer patients, we suggest the use of Diego dalla palma professional LENITIVO SOOTHING face & body cosmetic products enriched with ingredients with soothing and moisturising action aimed at reinforcing the skin's barrier function and restoring comfort and softness. These products are supported by efficacy and safety tested carried out at the dermatological clinic of the University of Naples Federico II on subjects with sensitive skin, after antibiotic treatment, undergoing cancer therapy or previous cancer therapy.

All ingredients of these cosmetic products have been selected for their high tolerability and to minimise the risk of allergies. Each batch has been analysed to ensure a nickel, chromium, cobalt, mercury, arsenic and lead content of less than 0.00001% (0.1 ppm) because scientific studies have shown that even residual contents of heavy metals (nickel, chromium, lead) can create allergic reactions or sensitisation, particularly in predisposed individuals.

In faith,
